MS Handrails

Cast Aluminium Gates & Doors

Car Parking Shades

Aluminum & Steel Pergola

Curtain Walls

Aluminium Doors & Windows

UPVC Doors & Windows

All Fabrication Works

Stainless Steel Handrails:

Sandwich panels are a modular building material designed to cover buildings and structures. These panels consist of two layers that form the outer structure and ensure form, weather resistance and rigidity. They contain a core that provides thermal and acoustic insulation properties.

The width of the insulation board is usually 1,000 mm and, in some models, it is 1,150 mm wide. The length of the sandwich panel can be adjusted according to the needs of each project, the most common dimensions being between 3 & 6 metres, but, in some cases, a maximum length of up to 16 metres can be reached. The thicknesses of these panels can vary enormously depending on the final application.

Glass Handrails:

The use of glass handrails or handrails in the interior of the building has a great impact on the beauty of the building and gives it a unique beauty. With less and less fans of glamorous designs and decorations, glass railings have attracted a lot of attention. It is also used in many modern and minimalist architectures.

Handrail glass is generally made of laminated glass. Available in widths of 5, 6, 8, 10 mm. The strength of these fences is related to the thickness of the layers of Securite glass. Glass handrails are durable and easy to install. The advantages of using a glass fence are easy cleaning and no rot against moisture.

Glass Doors & Partition:

Glass walls come in many forms but one cannot deny that they are always sophisticated and modern. The fashion of "wood boxes" is long gone, and now people are leaning towards open spaces creating the feeling of transparency and open-mindedness. So many advantages come with the installation of the glass partition walls:

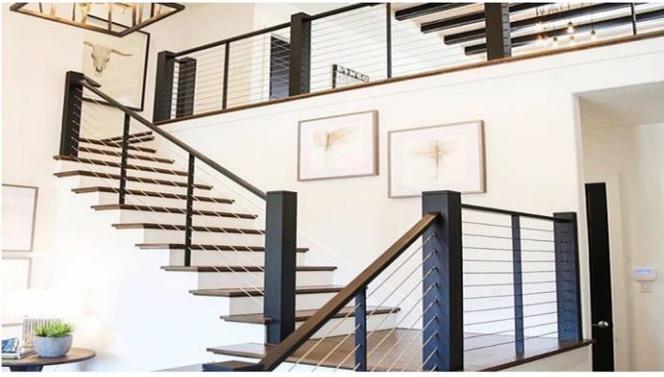

- Visual expansion of space and a feeling of lightness and vastness.
- 100% safe, made from tempered or laminated glass.
- Sound insulation with full visual transparency.
- Space zoning with minimal costs.
- Increase in the amount of natural light

Cast Aluminium Handrails:

Sandwich panels are a modular building material designed to cover buildings and structures. These panels consist of two layers that form the outer structure and ensure form, weather resistance and rigidity. They contain a core that provides thermal and acoustic insulation properties.

The width of the insulation board is usually 1,000 mm and, in some models, it is 1,150 mm wide. The length of the sandwich panel can be adjusted according to the needs of each project, the most common dimensions being between 3 and 6 metres, but, in some cases, a maximum length of up to 16 metres can be reached. The thicknesses of these panels can vary enormously depending on the final application, the most common values being between 40 & 150-200 mm thick depending on the application.

MS Handrails:

MS (mild steel) railing detail refers to the design and construction of railings made from mild steel. Mild steel handrails are a simple and effective accessibility aid and safety feature than can be utilised in a wide variety of internal and external projects. These are commonly used in industrial and commercial settings, as well as in some residential applications. They are known for their durability, strength, and cost-effectiveness.

The design of MS railings typically includes a frame, posts, and balusters or pickets, as well as a handrail. The specific details of the design may vary depending on the application and the requirements of the building code.

Cast Aluminium Gates & Doors:

Cast aluminum Gates & Doors are a type of entryway that uses cast aluminum as the primary material. Cast aluminum is produced by pouring molten aluminum into a mold, allowing it to cool and solidify, and then removing the finished product. These doors are known for their durability, low maintenance, and corrosion resistance, making them an excellent choice for various applications.

Cast Aluminum are robust and can withstand harsh weather conditions, heavy usage, and impacts. They are less likely to dent, warp, or corrode compared to other materials like wood or steel. Aluminum has a natural oxide layer that protects it from corrosion.

Car Parking Shades:

A Parking lot shade will enhance your parking area by blocking out UV rays and adding a stylish design. Each parking lot shade is built to commercial standards, meaning that they're heavy duty and long-lasting. These parking lot shade structures are perfect for hotels, sports complexes, resorts, retail operations or any sort of entity. Best of all, each shade is custom made according to the dimensions of your parking area. Choose from a variety of heights, shade spans, and canopy sizes.

Benefits:

- UV Screening
- Water Repellence
- Cooler Vehicles

Aluminium and Steel Pergola:

A metal pergola is a wonderful addition to any house with a charming garden or open area, offering an extension into the outdoors. Create a shaded haven near the poolside, walkway, or seating area. It turns into the ideal location for get-togethers with loved ones, whether it's for a delicious meal, BBQ, sunbathing, or swimming. Additionally, certain metal pergola models come with sides, offering privacy for those seeking a serene and secluded outdoor relaxation space. Enjoy the best of both worlds with a versatile and stylish metal pergola.

Discover the charm of a metal pergola, perfect for transforming your outdoor haven. With a shaded area, you can escape the scorching sun and enjoy extended living space in your garden.

Curtain Walls:

A curtain wall is an exterior covering of a building in which the outer walls are non-structural, instead serving to protect the interior of the building from the elements. Because the curtain wall façade carries no structural load beyond its own dead load weight, it can be made of lightweight materials. The wall transfers lateral wind loads upon it to the main building structure through connections at floors or columns of the building.

Unlike storefront systems, curtain wall systems are designed to span multiple floors, taking into consideration building sway and movement and design requirements such as thermal expansion and contraction; seismic requirements; water diversion; and thermal efficiency for cost-effective heating, cooling, and interior lighting.

UPVC Doors & Windows:

uPVC or un-plasticised Polyvinyl Chloride is a material that is rising in popularity in the fenestration industry owing to its robustness and durability. What makes uPVC unique is its flexibility and durability, which makes it possible to mould it into different shapes and sizes. Plus, uPVC doors and windows are available in highly bespoke options based on the design, size, and colour, which make them all the more a hit among homeowners.

All Fabrication Works:

Metal fabrication is a somewhat broad term for several types of fabrication processes. Cutting, punching, forming, shearing, stamping, welding are common fabrication techniques used to shape, cut, or mold raw metal material into a final product. Fabrication is distinct from other manufacturing processes.

Fabrication manufacturing processes differ depending on the material and the desired end product. In industrial fabrication processes, chances are one or more of the following methods will be used to finish or produce a part or end product:

- Forming
- Punching
- Shearing
- Stamping
- Welding

OUR SERVICE

The right partner – who stands by you throughout the planning process, finds solutions and answers to every challenge, relieves you of your workload and provides security.

We offer you an all-round care free package for your all manufacturers – true to the DOORWIN philosophy: Reliable **SERVICE FROM ONE SINGLE SOURCE**.
